FRUIT TREES

Berry & Vegetable PLANTS

1922

C. E. FIELD

SEWELL.

NEW JERSEY.

PARCEL POST

Even though the conditions of the express service have become normal again we still favor Parcel Post for the shipment of plants. Our customers have found it very convenient in many cases, especially when located on Rural Delivery Routes, as the plants are delivered at the door, not only saving the time of going to the express office for them, but save the worry of them lying about there.

The weight and size of package has been increased to such an extent that a fair size order can be sent in one package, weight being 70 lbs. as far as the third zone, which is 300 miles from Sewell, N. J., and 50 lbs. anywhere in the United States, so we can send any size order by making a number of packages that will comply with the above conditions.

It is impossible to estimate the exact amount of postage required to send an order of plants until they have been packed for shipment. The postage must be fully prepaid before the Postmaster will accept the package. There has been different methods adopted to estimate the amount of postage for a given number of plants, if plants are sent C. O. D. postage which is often suggested, the extra money charged for the C. O. D. and the fee for the returned money order is charged to the purchaser. Then if a customer undertook to send enough money to cover the postage and was too much or too little, which would mostly be the case, it would cause a great deal of confusion and require extra clerks to keep accounts straight.

After considering all we have adopted a method which we have been using since the event of Parcel Post, and is giving very good satisfaction. We simply make a flat rate for Parcel Post shipments to the different zones. If you wish to have your order sent by Parcel Post take the price from the Parcel Post list that has been sent to your Post Office, and your order will be sent to you with all postage fully prepaid regardless of cost. Some times we gain a few cents and other times we lose, but we have found this the most practical way to list plants that are to be shipped by Parcel Post.

The first four columns in the price list are the prices for plants F. O. B. Sewell, N. J. Order from this list when desiring to have order sent by express or freight, the transportation charges to be paid at destination by the purchaser.

The last four columns in the price list are the prices for plants when you desire to have the order sent by Parcel Post, with all postage fully prepaid.

VEGETABLE PLANTS

HOW WE GROW VEGETABLE PLANTS

First, nothing but the best of seed is selected, then it is drilled thin so as to make good, strong plants of even size, with good roots.

The early plants are grown in cold frames and well hardened up by the time they are the proper size for shipment. For the very early planting we start some of the early varieties in green houses and then transplant them to cold frame. This makes an extra large and very stalky plant, which is most desirable for the very early planting, when the weather conditions are not so favorable.

We usually have a surplus in Tomato, Pepper and Egg Plants, in these young seedlings from green house during the month of April. We will fill orders while they last, to any one wishing to transplant in cold frame or pots. The price will be the same as the drilled plants from cold frame.

DRILLED PLANTS FROM COLD FRAME

These plants have not been transplanted, but are drilled thin and make good, stout plants, from 6 to 10 inches tall, about the same style plant that is grown in the open field. Ready about four weeks earlier than the field grown plants.

FIELD GROWN PLANTS

Here is where we grow them by the millions as our climate is early enough here in South Jersey to have the out-door plants ready for shipment by the time most of the northern states are ready to plant their main crop. As soon as the weather permits we sow seeds of most all the different kind of vegetable plants that we grow in the open field, and continue sowing so as to have a good supply through the entire season; even though we do our best, some times our supply will become short on some varieties, while we have an over supply on others, so we still urge our customers to place their orders as far in advance as possible, which will help us to meet the demand and perhaps save you disappointment at planting time.

EARLY CABBAGE PLANTS

The first lot of cabbage plants we will have to offer will be the drilled plants from cold frame, which are usually ready about April 20th. We will grow the following varieties: Early Jersey Wakefield, Charleston Wakefield, Copenhagen Market and All-Head Early.

VEGETABLE PLANTS

FIELD GROWN CABBAGE PLANTS

Cabbage seed is sown in the open field the latter part of March. These plants are ready for shipping about the middle of May. Varieties ready at this time: Early Jersey and Charleston Wakefield, Copenhagen Market, All-Head Early, Early Summer and Glory.

The later sowings include all those mentioned above with the exception of the Wakefields, and the addition of the late varieties such as Danish Ball, in long and short stem; Surehead, Late Flat Dutch, Red Mammoth Rock and Perfection Hard Head Savoy.

CAULIFLOWER PLANTS

The first lot we will have to offer will be the drilled plants from the cold frame. They are ready about the same time as the cabbage plants, April 20th. We will have field plants any time after the middle of May. We grow the one variety only: Early Snowball, which is the best of all.

EARLY TOMATO PLANTS

Will have a supply of the transplanted plants in the cold frames in the early part of May, which we recommend for the early planting. Varieties: Earliana, John Bear, Bonny Pest, and Chalk Jewel.

Our next supply of tomato plants are those drilled in cold frame, which we depend upon to supply our trade the latter part of May. We will grow the same varieties as mentioned above, including Greater Baltimore and Stone.

FIELD GROWN TOMATO PLANTS

The later plants are grown in the open field, not transplanted, but make good, stalky plants from 8 to 12 inches tall. They are usually ready by the first week in June, and we make continuous sowings to have a good supply of plants at the proper size throughout the season. Varieties: Earliana, John Bear, Bonny Best, Chalk Jewel, Greater Baltimore, Matchless, Success, New Stone and Small Yellow Egg.

PEPPER PLANTS

Pepper plants are grown in the cold frames only, transplanted and drilled, as the field grown plants would be entirely too late. We will have them ready any time after the middle of May. Will grow the following varieties: Ruby King, Ruby Giant, Chinese Giant, Bullnose and Long Red Cayenne.

C. E. FIELD. SEWELL, NEW JERSEY Page 4

VEGETABLE PLANTS

EGG PLANTS

Egg plants are more difficult to grow than most other plants. It requires much more warmth and extra care to grow them, in fact they should not be set out in the open field until the weather becomes very pleasant. We will grow them in the transplanted plants only. Varieties: Black Beauty and N. Y. Purple.

LETTUCE, BRUSSEL SPROUTS AND BEET PLANTS

Our first supply of these three vegetable plants are the drilled plants from the cold frame, ready about April 20th. After the middle of May we can fill orders from the field grown plants at lower rates. Will grow the following varieties: Lettuce—Big Boston and Cream Butter; Beets—Early Egyptian and Detroit Dark Red; Brussel Sprouts—Long Island Improved.

SWEET POTATO PLANTS

We will have a good supply of sweet potato plants, and will be ready to fill orders any time after May 1st. Will grow the following varieties: Up-River and Kelly, both yellow; and Jersey Red.

CELERY PLANTS

Our celery plants are grown in the open field only. We will be prepared to fill orders any time after June 15th. Will grow the following varieties: Golden Self Blanching, White Plume, Winter Queen, Giant Pascal, Winter King, and Boston Market.

ASPARAGUS ROOTS

We can supply the following varieties in one year old roots: Palmetto, Conovers, and Columbia.

CARE OF PLANTS WHEN RECEIVED

Unpack as soon as possible, if plants are in a wilted condition (wet the roots only), stand the plants upright in a few inches of water, but remove them as soon as they freshen up. If the land is prepared, plant late in the afternoon and water as planted; put a little loose dirt around plant after water has settled, if weather is dry and hot, to prevent baking. If your land is not prepared when plants arrive, they can be heeled in a furrow in a shady place just a little deeper than they naturally grew. The plants can be left there until the weather is suitable and you are prepared to plant. By practicing this method one can get a good stand, otherwise it might be a total failure.

FRUIT TREES

We have some of the very best stock to offer this season in fruit trees, as well as other small fruits. We guarantee our stock to be first-class in every respect, true to name, and reach you in good growing condition.

I suppose that most every one is aware of the fact that there is still a shortage of nursery stock in the country. It is advisable to make your selection and place your order promptly to secure the stock desired, otherwise you may be disappointed at planting time by not being able to find the selection that you desire, or perhaps none at all.

You will notice in our terms of sale, on page 10, that we will allow a discount on all orders received by March 15th, when cash is accompanied in full. This will mean a satisficated you of several cents on most grades of trees and other plants accordingly, at the same time it will assure you of getting the stock that you desire, which will be worth even more to you than the saving you make in cash.

We will also book orders in advance if one-fourth of the amount is sent with the order, and reserve the stock until you desire to have it shipped, the balance being paid before shipment is made or will send good C. O. D. for the balance.

HOW TO FIGURE PRICES. Under 30 trees go at ten rate, 30 or more at the 100 rate, 300 or more, (300 apple, 300 peach, etc.) go at the 1000 rate. The same applies to all goods listed on pages 5 and 6.

STRAWBERRIES

AROMA. Per. Late. An old variety that is still a favorite with many growers in spite of the new varieties that have been introduced. It makes a sufficient amount of plants for a good fruiting bed. The berries are very large, bright red, firm and exceedingly productive. Very good quality, making a good one either for a home garden or market.

BIG JOE. Per. Late. A vigorous grower, making large, stalky plants, which are very productive of large berries, conical in shape, uniform in size and excellent in quality. One of the best late sorts, but needs a good, rich, loomy soil for best results.

CAMPBELL'S EARLY. Per. The best early berry that we have found. It is an extra early berry that will ripen with any of the early varieties, but much superior to them all. It makes a good, heavy bed of strong, well-rooted plants, and is a heavy bearer of large berries that hold their size well to the end. They are firm and very showy, consequently a money maker, as the crop is marketed before most of the other varieties come on.

GANDY. Per. Late. This is an old variety that is heavily planted by many of the commercial growers, as it is the firmest of them all, and picks later than any of the other summer varieties. It is a little more acidy than some others, but has enough good merits to make it a profitable berry.

HOWARD. Per. Medium Early. This new variety has proved to be an extra berry, and without a doubt will become one of the leaders. It is a perfect blooming variety, fairly early, large berries and a heavy yielder. A good shipper and something strictly fancy. It is highly praised by all who know it. Do not fail to give it a trial.

LUPTON. Per. Late. This berry is a recent introduction of South Jersey, but has become so popular already that the demand for plants far exceeds the supply long before the season is over. It is a handsome berry, one of the firmest, making it an excellent shipper. The Lupton is being used in preference to the Gandy and Chesapeake by many of the commercial growers. It is more productive than either two mentioned above, and has the size and evality. Do not hesitate about planting the Lupton.

SUCCESS. Per. Early. The old reliable variety that we can still recommend. Campbell's can beat it a little in earliness, but that is all. It makes a good, heavy bed of strong, well-rooted

STRAWBERRIES

plants, and the berries are all any one could desire. They are very productive, fruit large, having a long picking season and holding a size well to the end. Good shape, fine flavor, and very firm for an early berry. One that has replaced the Dunlap.

WM. BELT. Per. Mid-season. The best with us for mid-season. It makes a heavy bed of large plants. Fruit very large and one of the most perfect berries. A brilliant, glossy red, and ripens all over alike. The quality is the best, always commanding the highest price on the market.

PROGRESSIVE. Per. Everbearing. This is one of the most popular everbearers. It is a very strong and thrifty grower, very free in making new runner plants, which are of medium size and often producing fruit before they become thoroughly rooted. The berries are of medium size, not as large as the Superb, but much more productive, and has a flavor of the wild strawberry.

PEERLESS. Per. Everbearing. This is one of the newer varieties, but has been tried out and considered superior to the Superb. The fruit is as large and attractive, the plants are much more thriftier than the Superb, and much more productive of fruit in the fall of the season they are planted.

SUPERB. Per. Everbearing. This is the leading variety of everbearers in some sections. The berries are large and strictly fancy, they make an extra large plant, with a number of heavy crowns, but not so free in making new runner plants. The crop of fruit in the fall of the same season that it is planted is grown principally on the mother plants.

State of New Jersey DEPARTMENT OF AGRICULTURE

ļ

Alva Agee, Secretary

Bureau of Statistics and Inspection

Franklin Dye, Chief HARRY B. WEISS, Chief

No. 89.

Trenton, N. J., September 14, 1921.

THIS IS TO CERTIFY, That we have this 16th day of July, 1921, in accordance with the provisions of Chapter 268, Laws of 1916, State of New Jersey, inspected or caused to be inspected by a duly appointed Inspector the general nursery stock growing in the C. E. Field Nurseries of C. E. Field, Proprietor, at Sewell, in Gloucester County, New Jersey, and have found the same apparently free from San Jose Scale and other dangerously injurious insect pests and dangerously destructive plant diseases.

This certificate expires June 1st, 1922, and covers only stock actually in the nurseries

This certificate expires June 1st, 1922, and covers only stock actually in the nurseries when examined.

THOMAS J. HEADLER, State Entomologist.

MEL. T. COOK, State Plant Pathologist.

GEORGE L. WALTERS, Inspector

We will sell 50 plants of any one kind at the 100 rate, less than 50 to be charged at the dozen rate, between 100 and 500 to be charged at the 100 rate, between 500 and 1000 to be charged at the 500 rate, less than 5000 to be charged at the 1000 rate. We can often give lower rates when wanting large quantities.

We take great care in labeling and packing, and do warrant our stock to be true to name, with the understanding that should any prove untrue we will replace with other stock or return the price paid for it, but will not be responsible for any greater amount than the purchase price.

INSTRUCTIONS

READ CAREFULLY BEFORE MAKING OUT ORDER

Please use order sheet found in this book. Be sure to fill in all blank spaces, write name and address PLAINLY, which will save 'ime and trouble, and enable us to fill your order more accurately and promptly.

ORDER EARLY

The earlier you order, the better it is for all concerned. It gives us a better chance to handle our orders more expediently when the rush comes on and gives all better service in general. You are more likely to get what you want, when you want it, as it often is the case of some varieties becoming completely exhausted long before the season is over.

SUBSTITUTION

When ordering late in the season it may be well to mention second choice in case we are sold out of the variety desired. If you do not wish us to substitute do not fail to mention it when ordering. Sometimes when we do not have the desired article we can fill the order by using another variety similar to the one ordered, and will do so to save delay unless notified to the contrary, then if we can not supply the stock desired we will return your money.

TERMS

Cash with order, or when you wish to place your order long before planting time, which has proven to be a good policy, owing to the great demand for plants. We will book your order if one-fourth of the amount is sent with order and the balance is to be paid before the shipment is made. We will allow a discount of five per cent on all orders received by March 15th, when accompanied by cash in full.

HOW WE SHIP AND HOW TO REMIT

By Express and Parcel Post, unless very early in the season large orders of fruit trees and berry plants can go by freight if distance is not too great.

Remit by Post Office or Express money order, registered letter, bank draft, or check will do. We will not be responsible for currency mailed to us that is not registered. Stamps are acceptable for small amounts.

REFERENCE

In regards to our reliability, I refer you to the Pitman National Bank, of Pitman, N. J., or the Postmaster and Express Agent of Sewell, N. J.
